DAMON VERSAGGI

FORWARD DEPLOYED CREATIVE | CREATIVE TECHNOLOGY | AI PRODUCTION SYSTEMS

New York, NY | Portfolio: https://scrappymeals.com/luma

Creative technology leader who turns emerging technology into production workflows creative teams actually use. Built and deployed real-time graphics systems for major broadcast environments, trained creative teams on new production technology, developed immersive 3D experiences, and launched AI-powered products from concept through production. Operates between creative, product, engineering, and business teams to translate technical capability into usable workflows, high-craft experiences, and scalable systems.

CORE EXPERTISE

Generative AI | Creative Technology | AI Production Workflows | Creative Direction | Production Pipeline Design | Real-Time 3D | Motion Graphics | Interactive Experiences | Workflow Prototyping | Emerging Technology | Technical Direction | Creative Strategy | Product Development | Client Consulting | Enterprise Technology Adoption | Cross-Functional Leadership | Training & Enablement | VFX / Broadcast Production | WebXR | AR | AI Agents | OpenAI APIs

SELECTED IMPACT

- Built creative technology systems used in high-profile live environments including ESPN, CNN, MSNBC, CBS, Amazon Prime Sports, Fox Business Network, and New Year's Rockin' Eve.
- Trained and enabled approximately 1,000 artists, operators, and creative technologists on real-time production systems and emerging workflows.
- Created Fridgie Smalls, an AI-powered food platform combining generative AI, interactive product design, real-time content, and consumer-facing automation.
- Scaled Fridgie Smalls to approximately 20,000 users while reducing input-token usage by 72%, cutting overall tokens per request by roughly 40%, and improving response speed by approximately two seconds.
- Built Scrappy Meals XR and The Metacheese as experimental platforms combining interactive 3D, WebXR, gaming, storytelling, food, and emerging technology.
- Designed new creative workflows in environments where the process did not yet exist, moving from prototype to repeatable production system.

PROFESSIONAL EXPERIENCE

SCRAPPY MEALS LLC — Founder / Creative Technology Lead | New York, NY | 2016–Present

- Lead creative technology, product development, AI experimentation, interactive storytelling, and immersive production across Scrappy Meals XR, Fridgie Smalls, 3D Menus, and related digital experiences.
- Created Fridgie Smalls, an AI-powered recipe platform that turns ingredients, dietary preferences, cuisine choices, and constraints into personalized recipes and cooking guidance.
- Architected AI workflows using OpenAI APIs, prompt systems, serverless infrastructure, speech input, interactive UI systems, and production optimization.
- Reduced Fridgie Smalls input-token usage by approximately 72% and total tokens per request by approximately 40%, supporting roughly 4,000 requests per $1 of API spend.
- Grew the platform to approximately 20,000 users while iterating across product design, AI behavior, interface design, performance, and user experience.
- Built interactive 3D and WebXR experiences connecting physical food, digital products, restaurants, education, and game-inspired storytelling.
- Developed The Metacheese, an immersive virtual culinary environment designed to teach food appreciation through interactive digital experiences.
- Worked directly across creative direction, prototyping, product strategy, technical architecture, interaction design, and production.

EFUNDEX — VP, Sales & Technology / Product, Technology & Growth Advisor | New York, NY | 2015–Present

- Lead technology strategy, workflow design, product development, automation, sales systems, and AI adoption for a working-capital finance company.
- Design AI-assisted operational workflows spanning lead generation, data processing, public-record research, qualification, CRM processes, and customer outreach.
- Translate business problems into practical technical systems and automation strategies, connecting business, sales, data, compliance, and technology requirements.
- Develop workflow blueprints designed to scale state-by-state data operations into national systems.

CREATIVE TECHNOLOGY / REAL-TIME PRODUCTION — Consultant, Technical Director & Creative Technologist | New York, NY

Selected work: ESPN | CNN | CBS | MSNBC | Amazon Prime Sports | ABC | Fox Business Network | New Year's Rockin' Eve

- Delivered real-time graphics, interactive production, augmented reality, technical direction, workflow development, and creative technology for major media organizations and live productions.
- Built and supported real-time graphics and data-driven visual systems for nationally televised live productions.
- Developed workflows connecting creative teams, control-room systems, graphics engines, live data, operators, and production infrastructure.
- Helped creative and production teams adopt new real-time technologies and transition from traditional graphics workflows to interactive, data-driven systems.

- Partnered directly with producers, designers, engineers, operators, and executive stakeholders to translate creative ideas into technically executable systems.

VIZRT — Creative Technologist / Demo, Training & Solutions Leadership

- Helped creative organizations understand, adopt, and operationalize real-time 3D graphics technology.
- Demonstrated real-time graphics technology to broadcasters, creative teams, and enterprise customers, translating platform capabilities into concrete production applications and workflows.
- Trained approximately 1,000 artists and operators across real-time graphics, production systems, and workflow implementation.
- Led a five-person demonstration and training team supporting customer adoption.
- Helped launch Fox Business Network using Vizrt real-time graphics technology.
- Rapidly learned complex production systems and converted that knowledge into scalable training and operational practices.

TECHNOLOGY & PRODUCTION

REAL-TIME 3D & IMMERSIVE: Vizrt | Unreal Engine workflows | WebXR | AR | Interactive 3D | Real-time graphics | Data-driven graphics | Virtual environments | 3D scanning | Browser-based immersive experiences

GENERATIVE AI & AI SYSTEMS: OpenAI APIs | AI agents | Prompt architecture | Generative content systems | AI workflow design | API optimization | AI-assisted product development | Production automation | Generative creative experimentation

CREATIVE PRODUCTION: Creative technology | Motion graphics | Broadcast graphics | Live production | Technical direction | Production pipeline design | Prototyping | Creative workflow development | Interactive storytelling

PRODUCT & TECHNICAL: JavaScript | Three.js | Web technologies | Serverless systems | Vercel | API integrations | GitHub | Product prototyping | Workflow automation | Speech interfaces | Interactive application development

LEADERSHIP & CONSULTING: Executive presentations | Client consulting | Creative strategy | Technology adoption | Cross-functional leadership | Training | Team development | Workflow transformation | Zero-to-one product development

SELECTED PROJECTS

FRIDGIE SMALLS: AI-powered consumer product transforming available kitchen ingredients into personalized recipes and food experiences.

SCRAPPY MEALS XR: Creative technology platform exploring the intersection of food, interactive media, immersive experiences, education, and gaming.

THE METACHEESE: WebXR culinary world created as an experimental platform for interactive food education and digital storytelling.

REAL-TIME BROADCAST SYSTEMS: Creative and technical work supporting live graphics and immersive production for ESPN, CNN, CBS, MSNBC, Amazon Prime Sports, Fox Business Network, and major entertainment broadcasts.
